ACL Reconstruction

Recovery Timeline

Immediate Post-op

- If issued a knee immobilizing brace – wear with walking and sleeping
- Initiate physical therapy 2 days post-op (then 2-3 times per week)
- Focus on keeping knee straight
- Ice frequently using ice pack or game ready device
- Keep leg elevated above heart as often as possible
- Keep incision dry
- Weight bearing as tolerated
- If at any time you have discomfort, swelling or redness in the calf (behind the leg between the knee and ankle) please call the office immediately.

Week 1-2

- Perform home exercise program given by PT
- Stationary bike (ROM only w/ no resistance)
- Follow-up appointment with M.D. and removal of sutures one week post-op
- Scar mobs after sutures are removed and incision is closed

Week 2-4

- Balance training
- Focus on gait pattern

Week 4-6

- Follow up with M.D. around 4 – 5 weeks post op

Week 12

- May start running on treadmill if cleared by physical therapist

Week 16-20

- Initiate agility, plyometrics, running curves, cutting and biking outdoors

6 months- full return to activity

- Continue strengthening
- Progress running, agilities
- Gradual return to sports
